

Medical Consent Management System

Jira Backlog Creation Report

Vaishali Krishnan, PES1UG24AM313, SEC F

Built the Epic → Story → Sub-task hierarchy

- Created Epic "Patient Consent Management" (SLA-5) to hold all five functional requirements.
- Created Epic "System Quality and Compliance" (SLA-6) to hold both non-functional requirements.
- Created FR-001 through FR-005 as Stories under SLA-5, each with a user-story description, acceptance criteria drawn from the LAB 1 document, and a priority (High/Medium).
- Created 11 sub-tasks under FR-001 (SLA-8 through SLA-18), one per step of the main success scenario — from displaying verified doctors through to the confirmation message.
- Created NFR-001 and NFR-002 as Tasks under SLA-6, with acceptance criteria for the audit trail and concurrency/performance targets.

Polished against the source document

- Compared the backlog against the LAB 1 alternate flows and found two gaps: FR-001 didn't cover A1 (unverified doctor), and FR-003 didn't cover A2's audit-logging and doctor-notification requirements.
- Added acceptance criteria for both alternate flows, and a new sub-task (SLA-25) for handling an unverified doctor selection.
- Labeled every FR issue "functional-requirement" and every NFR issue "non-functional-requirement" so the board can be filtered by requirement type.

2. Final Backlog Structure

Key	Type	Summary	Priority
SLA-5	Epic	Patient Consent Management	—
SLA-7	Story	FR-001: Grant time-bounded access consent (+11 sub-tasks, SLA-8–18, SLA-25)	High
SLA-19	Story	FR-002: View active and past consent permissions	Medium
SLA-20	Story	FR-003: Revoke active consent	High
SLA-21	Story	FR-004: Notify doctor about consent changes	Medium
SLA-22	Story	FR-005: Verify and manage doctors	High
SLA-6	Epic	System Quality and Compliance	—
SLA-23	Task	NFR-001: Maintain append-only audit trail	High
SLA-24	Task	NFR-002: Support 5,000 concurrent users	Medium

3. Screenshots

Live screenshots of an authenticated Jira board can't be captured automatically from this conversation. Below is exactly what to screenshot and where, so the images can be dropped in after export. Suggested crop: the full backlog panel for the epic/issue named, with sub-tasks expanded where noted.

FR-001 Grant time-bounded access consent (SLA-7)

Jira work item

SLA-5 / SLA-7

FR-001: Grant time-bounded access consent

To Do ⚡ ⬆ Improve Story ⋮ +

Description

As a patient, I want to grant a verified clinic doctor access to selected diagnostic records for a specific period so that I can control who accesses my medical information and for how long.

Acceptance Criteria:

- The patient can select a verified doctor.
- The patient can select specific diagnostic records.
- The patient can specify an access duration, such as 24 hours.
- The selected doctor can access only the permitted records during the specified period.
- Access is automatically revoked after the consent expires.
- The system records the consent event in the audit trail.
- The doctor is notified when consent is granted.
- If the selected doctor is not verified, the system displays an error message and lets the patient select another doctor or cancel (Alternate Flow A1).

FR-002 : View active and past consent permissions (SLA-19)

Jira work item

SLA-5 / SLA-19

FR-002: View active and past consent permissions

To Do

⚡

✦ Improve Story

...

+

Description

As a patient, I want to view all my active and past consent permissions, including their status and expiry time, so that I can monitor and manage access to my health data.

Acceptance Criteria:

- The patient can view all consent permissions.
- Each consent displays its status.
- Status can include Active, Revoked, or Expired.
- Each consent displays the correct expiry time.
- No consent record is missing or displays incorrect information.

FR-003 Revoke active consent (SLA-20)

Jira work item

SLA-5 / SLA-20

FR-003: Revoke active consent

To Do

⚡

✦ Improve Story

...

+

Description

As a patient, I want to revoke an active consent permission at any time so that I can immediately withdraw access to my medical records.

Acceptance Criteria:

- The patient can select an active consent.
- The patient can revoke the selected consent.
- The doctor's access is immediately removed after revocation.
- The doctor cannot access the associated records after revocation.
- The consent status is updated to Revoked.
- The system logs the revocation event in the audit trail (Alternate Flow A2).
- The doctor is notified when consent is revoked (Alternate Flow A2).

FR-004 Notify doctor about consent changes (SLA-21)

FR-005 — Verify and manage doctors (SLA-22)

NFR-001 — Maintain append-only audit trail (SLA-23)

☒ Jira work item

SLA-6 / ☒ SLA-23

🔒 1 🔗 ⋮

NFR-001: Maintain append-only audit trail

To Do ▾ ⚡

⬆ Improve Task ⋮ +

▼ Description

The system shall permanently record all consent grant, revoke, and access events in an append-only audit trail.

Acceptance Criteria:

- Audit records cannot be modified.
- Audit records cannot be deleted.
- Each record contains the event type.
- Each record contains user details.
- Each record contains a timestamp.
- An incomplete, modified, or deleted audit record is considered a failure.

NFR-002 — Support 5,000 concurrent users (SLA-24)

☒ Jira work item

SLA-6 / ☒ SLA-24

🔒 1 🔗 ⋮

NFR-002: Support 5,000 concurrent users

To Do ▾ ⚡

⬆ Improve Task ⋮ +

▼ Description

The system shall support at least 5,000 concurrent users with an average response time of less than 2 seconds for consent-related operations.

Acceptance Criteria:

- The system supports 5,000 concurrent users.
- At least 95% of consent-related requests complete within 2 seconds.
- Response times exceeding 2 seconds for more than 5% of requests are considered a failure.
